Computational physics

Cohen, B.I., D.C. Barnes, J.M. Dawson, G.W. Hammett, W.W. Lee, G.D. Kerbel, J.-N. Leboeuf, P.C. Liewer, T. Tajima and R.E. Waltz
The numerical tokamak project: simulation of turbulent transport 1

Anderson, D.V. and D.E. Shumaker
Hybrid Ordered Particle Simulation (HOPS) code for plasma modelling on vector-serial, vector-parallel, and massively parallel computers 16

Wang, J., P. Liewer and V. Decyk
3D electromagnetic plasma particle simulations on a MIMD parallel computer 35

Goplen, B., L. Ludeking, D. Smithe and G. Warren
User-configurable MAGIC for electromagnetic PIC calculations 54

Decyk, V.K.
Skeleton PIC codes for parallel computers 87

Krall, N.A. and S.E. Rosenthal
A technique for including 3D plasma turbulence in a two-dimensional plasma simulation 95

Tanaka, M.
The macro-EM particle simulation method and a study of collisionless magnetic reconnection 117

Lapenta, G. and J.U. Brackbill
Control of the number of particles in fluid and MHD particle in cell methods 139

Eastwood, J.W., W. Arter, N.J. Brealey and R.W. Hockney
Body-fitted electromagnetic PIC software for use on parallel computers 155

Vahedi, V. and M. Surendra
A Monte Carlo collision model for the particle-in-cell method: applications to argon and oxygen discharges 179

Verboncoeur, J.P., A.B. Langdon and N.T. Gladd
An object-oriented electromagnetic PIC code 199

Reynders, J.V.W., D.W. Forslund, P.J. Hinker, M. Tholburn, D.G. Kilman and W.F. Humphrey
OOPS: an object-oriented particle simulation class library for distributed architectures 212

Monaghan, J.J. and A. Kocharyan
SPH simulation of multi-phase flow 225

Sulsky, D., S.-J. Zhou and H.L. Schreyer
Application of a particle-in-cell method to solid mechanics 236
